Wireless internet configuration for Windows XP

Click on Start button in lower left of screen.
Select Control Panel from the dialog box that opens.
Select Network Connections

Right-click on Wireless Network Connection icon and select Properties. A Wireless Connections Properties window will open.
Click on the **Wireless Networks** tab within the Wireless Connections window.

Highlight KCADNet if it is present and click **Remove button** to remove KCAD from list of networks.

Click on **add button**, the Wireless Network Properties window will open, then type **KCADNet** in Network Name (SSID) text box.

Click on **Network Authentication** drop-down menu and select WPA

Click on **Data Encryption** drop-down menu and select TKIP
Click on Authentication tab and click on EAP Type drop-down menu. Select Protected EAP (PEAP) authentication.

Click the Properties button
- De-select **validate server certificate** (do not check this box)
- Select **Enable fast reconnect** (check this box)
- Select **Secured Password** as the authentication method in the Select Authentication Method drop-down menu.

Click on Configure button and de-select **Automatically use my Windows Logon name and password (and domain if any).**

Click OK button.
Click on the Wireless Connection bubble that appears in the lower right corner of the screen.

Enter your MyFSU username and password in the next window that appears and leave the domain field blank.
